

Jainish Shah

SOFTWARE ENGINEER

+1 (657)-799-0305 | jainishshah39@gmail.com | [LinkedIn](#) | [Portfolio](#)

Software Engineer with 6+ years of experience and strong fundamentals in Java, Object-Oriented Programming, and backend development. Knowledgeable in building and maintaining scalable applications using Java, Spring, JDBC, REST APIs, and SQL. Proficient in SDLC methodologies, data structures, automated testing, and backend performance optimization. Knowledgeable in cross-functional collaboration with frontend, product, and QA teams, supporting architectural discussions and delivering production-ready systems. Professional in working within high-scale, customer-facing environments with a security-first and reliability-focused mindset.

SKILLS

- **Languages:** Java (Java 8+), JavaScript, TypeScript, Python, C++, SQL
- **Java & Backend Technologies:** J2EE, Spring Boot, Spring MVC, JDBC, REST APIs, Maven, JUnit, Hibernate
- **Frontend Technologies:** React.js, HTML5, CSS3, JavaScript, TypeScript
- **Databases:** Oracle, MySQL, PostgreSQL, SQL Server, MongoDB
- **Tools & Platforms:** Git, GitHub, Jenkins, Docker, Linux, Tomcat, Jira, Kubernetes

PROFESSIONAL EXPERIENCE

California State University | Fullerton, California

Aug 2024 - May 2025

Teaching Associate

- Taught core backend development concepts, including REST APIs, relational databases, and server-side application design.
- Guided 40+ students in applying OOP principles, data structures, and clean coding practices across multiple assignments.
- Assisted students in debugging application logic, SQL queries, and API integrations in an Agile-style workflow.

Intellect Design Arena | Mumbai, India

Oct 2019 - Aug 2023

Senior Software Engineer

- Developed and maintained 12+ backend microservices using Java 8, Spring Boot, JDBC, and REST APIs, supporting enterprise banking workflows across 3+ business modules with secure authentication and role-based access controls.
- Implemented scalable data access layers using JDBC and Hibernate, integrating Oracle and MySQL, and handling 2M+ records across transactional and reference datasets while ensuring high availability and consistent response times.
- Created 250+ unit and integration test cases using JUnit, strengthening release stability and preventing recurring regressions across monthly production deployments through structured test suites and CI validation runs.
- Partnered with QA and product teams to triage 40+ defects per release cycle, performing root cause analysis and delivering hotfixes within 24–72 hours to ensure uninterrupted services for critical banking operations.
- Participated in 80+ sprint ceremonies, including planning, grooming, code reviews, and architecture discussions, improving delivery predictability for Agile scrum teams while mentoring juniors and aligning technical priorities daily.
- Built Python utilities (6+ scripts) for log analytics and anomaly detection, scanning 10K+ daily log lines to flag runtime failures and performance spikes using scheduled runs and standardized alerting formats.
- Engineered and optimized 30+ SQL queries and 15+ PL/SQL stored procedures in Oracle to support transaction processing, reconciliation, and audit-ready reporting with optimized indexing and performance-tuned execution plans.

Intellect Design Arena | Mumbai, India

Aug 2018 - Oct 2019

Software Engineer

- Developed 6+ backend modules using Java, Spring (MVC/Boot), and JDBC in a layered architecture, supporting transaction workflows.
- Optimized 25+ SQL queries and 10+ stored procedures to process 1,000+ daily transactions with audit tracking.
- Fixed 15+ production defects by debugging logs and resolving SQL/JDBC issues with QA, closing tickets in under 2 days.
- Deployed builds on Tomcat and managed 20+ Maven builds via CI pipelines, ensuring consistent deployments across DEV/UAT.
- Leveraged AWS services (S3, EC2) to store build artifacts/logs and support application deployment testing across environments

Adani | Ahmedabad, India

Jul 2017 - May 2018

Software Engineer Intern

- Assisted in developing 3+ internal web components using JavaScript and React, improving usability for 15+ daily users.
- Optimized 10+ SQL queries to support data extraction and validation, helping generate weekly reports for 2+ stakeholders.
- Supported closing 12+ bugs/tickets by reproducing issues, debugging logs, and coordinating fixes with senior engineers.

PROJECTS

Attendance Tracker | [Github](#) | [Document](#) | Tools – Python, Flask, GCP, MySQL, CI/CD, GIT

- Constructed a face-recognition attendance system using Python, Flask, OpenCV, PyTorch, and MySQL, deploying it on GCP Cloud Run with Cloud Build + Git Triggers CI/CD, while designing RESTful backend services and relational database schemas using layered architecture principles.

Portfolio Website | [Github](#) | [Link](#) | Tools – React, Vite, JavaScript, CSS, Firebase

- Built a personal portfolio using React + Vite to showcase projects, experience, and skills, leveraging React Hooks for dynamic interactivity and Vite's optimized bundling for fast load times.

Wellgorithm | [Github](#) | [Streamlit](#) | Tools – Python, Supabase, Groq, Llama-3, PDFPlumber

- Constructed an AI-native healthcare assistant using LangChain, Llama-3, Groq, Supabase, and Streamlit, implementing multi-model reasoning, PDF parsing, context injection, autonomous data-extraction workflows, and retrieval + evaluation pipelines to improve accuracy and reduce hallucinations.

EDUCATION

California State University, Fullerton, California

Aug 2023 - Dec 2025

Master of Science in Computer Science
